01	01/05/2023	Update layout add rain gardens

- LEGEND:**
- (1) New Porous Tarmac to Estate Road (5.0 meters wide)
  - (2) New paved pedestrian walkway
  - (3) New paved perimeter pathways
  - (4) New block paving to parking bays
  - (5) New retaining walls
  - (6) Proposed ecological buffer zones
  - (7) Existing trees
  - (8) Existing hedgerow to be retained
  - (9) Archaeological feature
  - (10) New turf to private rear gardens
  - (11) New turf to front gardens
  - (12) New native wild meadow (POS)
  - (13) New rain gardens
  - (14) New Specimen tree planting
  - (15) New native hedge planting
  - (16) New ornamental planting
  - (17) Development boundary

- General Notes**
- For ecological information refer to Kile Ecology Report
  - For structural drawings & information refer to RLH drawings
  - For Site drainage information refer to Engineers drawings
  - For proposed site levels refer to Engineers drawings

**DRAWING NO:** RS-254-230425-01  
**DATE:** 25/04/2023

**GENERAL PLANTING SPECIFICATIONS**

**Establishment**  
Hedging plants are to be planted at 8 plants per linear meter. They should be planted in a staggered fashion, with random distribution of the different species throughout the hedge. Each plant should be protected and supported using a 38mm spiral guard and bamboo cane, 600mm in height.  
All trees should be staked using sharpened wooden posts 60mm in diameter and 1.8 meters in length. They should be secured to the stakes with rubber banding. (Ref. Tree planting diagram)  
All beds for ornamental planting should be cultivated to a depth of 300mm. Soil should be loosened and broken into particles of 2-8mm.  
Soil surface should then be fine graded and any visible weeds roots and large stones removed.  
Position out plant material and excavate holes to approximately double the pot size. Mix compost to excavated soil material from hole at a ratio of 1 part compost to 3 parts soil.  
Remove plant from pot and position in hole, ensure plant is centrally positioned and root ball is level with existing graded soil.  
Backfill hole with excavated soil and compost mixture. Compact soil and roots and water plant in well.  
All Ornamental beds to be top dressed with a 50mm layer of bark mulch.  
All Grassed areas should be sown using a British seed House mixture at a sowing rate of 50gm/m<sup>2</sup> onto weed free soil with a fine tilth.  
Grass areas should be seeded between March and September.  
All Hedgerow planting should be top dressed with a 50mm layer of bark mulch to suppress weed growth.  
All Tree and Hedge Planting should take place between the end of November and the end of February.

**Landscape Maintenance**

All plant material should be watered after planting and also during dry spells or if material shows signs of wilting or stress. Any weeds present should be removed. All dead or dying plants should be removed and replaced within the first five years. Native hedges should be cut once they have reached their desired height 1800-3000mm. Tree Stakes and belting should be checked every year and loosened if required. Stakes can be removed within 3-5 years. Lawn mowing should be carried out between the months of March and October. On average twice a week during summer and once a week during spring and autumn.
